

galactic subhalos

- 16 trees $\times$ 16 rotations
- Milky Way disk tidal field
- 10^6 – $10^9 M_{\odot}$ over 4 Gyr
- truncated NFW profile

Simulated MW streams

- 24 observed streams
- track, proper motions, d , RV
- fit orbit, age, and mass
- simulate in MW + LMC potential

Stream-subhalo encounters

- impulse approximation
- peak velocity kick v_{kick}
- 256 realizations
